Mission Statement

- To provide clients with complete, functional solutions utilizing all the proven construction methods while incorporating advanced and innovative techniques.
- To be a valuable team member, to bring the project on budget, and on time

Products & Services

- Prefabricated architectural and structural building panels
- Rain screen stucco systems
- Structural and miscellaneous. steel detailing and fabrications
- Light gauge structural framing
- Batt and rigid insulation
- Demountable partitions
- Metal linear ceilings
- Acoustic ceilings
- Drywall

EIFS PANELS

Innovative, Versatile Light Weight Exterior Rain-Screen Panels

We are a qualified producer of panelized EIFS systems with a proven record of successful projects in both USA and Canada. All our EIFS installations are rain-screen systems with ICBO approval.

In addition to the inherent superior characteristic of the EIFS system, the ability to panelize these systems adds the following benefits:

- Eliminates the need to scaffold the exterior building (panels installed from the building interior)
- Allows fast-tracking the schedule due to ability to deliver and install panels in inclement weather that would otherwise hamper on-site applications.
- Factory controlled environment and improved quality control inspections

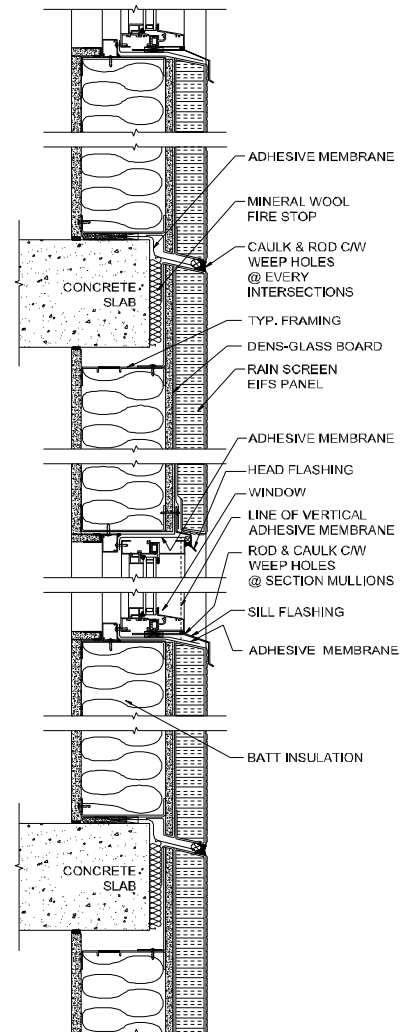

- Windows, vents and other exterior components may be preinstalled adding to the overall quality of the envelope.

- Pre-construction coordination with architect and developer to develop project specific details ensuring smoother execution during construction.

- Our in-house automated design process insures that all components properly fit and align throughout the entire project.

Panels are delivered complete with windows
